

STEELE SOLUTIONS

Catwalks

Safe Elevated Access.
Industrial-Grade.

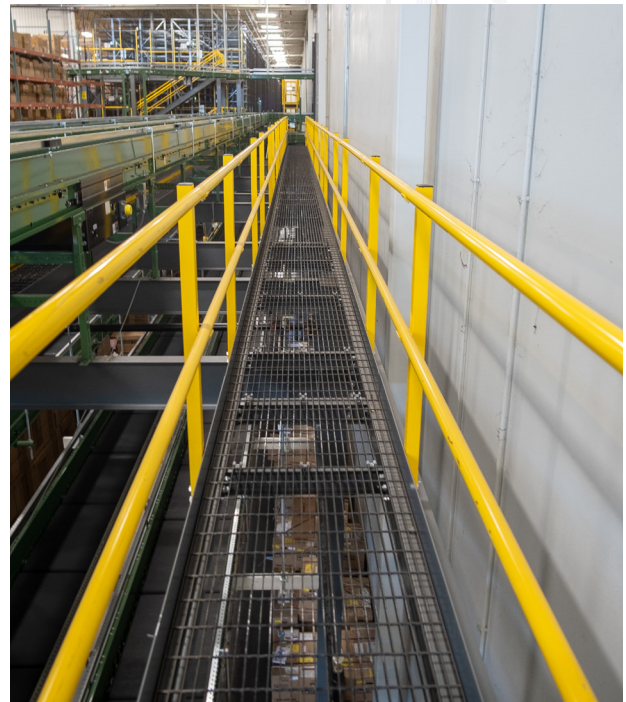

Catwalks offer safe and convenient access to conveyor systems and other critical equipment.

At Steele Solutions, we pride ourselves on delivering high-quality catwalk solutions made of durable, industry-grade steel with a professional powder-coated finish.

Seamless Design, Assembly & Installation

The modular design of our catwalks saves on expensive freight costs and provides installers the ability to perform in-field modifications seamlessly.

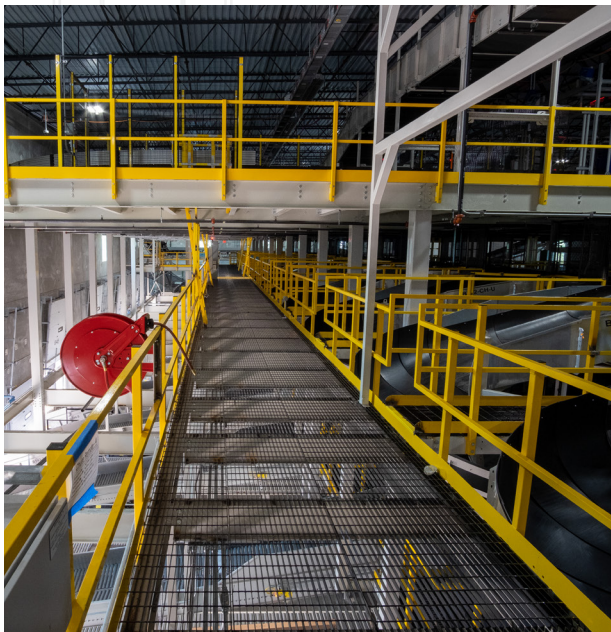

- **Structure:** Catwalks can be ceiling-hung, structure-supported, or floor-supported.
- **Widths:** We offer catwalks in widths of 24 $\frac{3}{8}$ ", 30 $\frac{5}{16}$ ", and 37 $\frac{1}{2}$ ".
- **Lengths:** Catwalks are shipped unassembled in 12' sections, which can be swiftly connected together. These sections can be field-modified to a shorter length to provide a precise fit.

Flooring

Steele Solutions' catwalks are offered in two flooring options:

- ResinDek® is a heavy-duty wood flooring panel that provides a durable, solid surface. Layered on top of 20-gauge steel roof decking, this option provides a comfortable and professional-looking walking surface.
- Bar grating offers great strength and reliability, ideal for situations where light, air, or sprinkler system water should be able to pass through.

Catwalks Designed to Meet Your Needs

At Steele Solutions, we deliver custom catwalk solutions to meet your unique specifications, timelines, and code requirements.

- Our experts listen to your needs and carefully study the facility layout to determine the optimal design for your catwalk system.
- It is our mission to ensure you have quick and safe access to key areas of your facility, so you never have to worry about a major delay in operations.
