

# SSI Automation: Controls and Automated Material Handling Solutions

## Faster, Smarter, Turnkey Controls

For integrators, OEMs, and end users in material handling who are frustrated by slow, inconsistent controls delivery, SSI Automation delivers intelligent, turnkey controls and automation solutions.

### SSI Automation delivers:

- Modular, reusable codebase for faster, repeatable deployment.
- Emulation and digital twin validation to QA logic before commissioning.
- Built-in diagnostics for faster troubleshooting.
- Platform-agnostic flexibility with Rockwell, Siemens, and other systems.

“ We’re giving clients something reliable: known code blocks, tested before deployment with diagnostics built in.”

**Todd Hunter**  
Controls Division Leader Steele Solutions

## A Process-Driven Approach

When you choose SSI Automation, you can feel confident that your project will move forward with a clear, tested, and proactive approach.

**Define:** Collaborate early to understand facility flow and functional requirements.

**Design:** Apply digital twin commissioning, AI-ready frameworks, and predictive maintenance.

**Develop:** Build modular logic and validated templates, reducing engineering time.

**Deploy:** Deliver plug-and-play sequences with structured field plans.

**Commission:** Enter commissioning with tested, validated logic and built-in diagnostics.

## Capabilities to Serve Your Project Needs

Steele Solutions Controls delivers turnkey automation with Emulation-ready PLC/HMI programming, standardized panel design, and coordinated field support. From installation through commissioning, our team ensures fast deployment, validated logic, and reliable lifecycle service for new installations, retrofits, and system upgrades.

## Why Choose SSI Automation?

- ✓ **Reduce Risk:** QA-tested systems before commissioning
- ✓ **Speed Up Startup:** Pre-validated templates accelerate go-live
- ✓ **Scale with Confidence:** Modular designs for repeatability and growth
- ✓ **Partner with Experts:** Decades of material handling experience, now applied to automation
