Previous Design

New Design

IBC designs shown. OSHA designs available.

Less Install Time

Pre-welded stringers, upright posts, and guardrail streamline on-site assembly, reducing installation hours and helping keep project timelines on track.

Fewer Components

With over 50% fewer components, the redesigned stair system enhances logistical efficiency—minimizing transportation complexity, accelerating installation, and reducing potential for errors.

More Usable Space

Enhanced structural integrity allows flush-mounted stair supports to the stringer channel, unlocking valuable floor space beneath the stairs.
